The soulutf8 package

Heiko Oberdiek* <heiko.oberdiek at googlemail.com>

2016/05/16 v1.1

Abstract

This package extends package <code>soul</code> and adds some support for UTF-8. Namely the input encodings <code>utf8.def</code> from package <code>inputenc</code> and package <code>ucs</code>'s <code>utf8x.def</code> are supported.

ö	References	25

1 Documentation

This package soulutf8 does not have own options and does not define new user commands. Any option is passed to package soul [1] that is loaded first. Then some internal macros of soul are redefined to add support for UTF-8. The following input encodings are supported:

```
utf8 LATEX base TDS:tex/latex/base/utf8.def [3] utf8x Package ucs TDS:tex/latex/ucs/utf8x.def [2]
```

UTF-8 byte sequences are added as token group to a word, even if these UTF-8 characters are some kind of hyphen or space. As exception the following three Unicode characters are handled specially:

Slot	Name	Action
U+00A0	NO-BREAK SPACE	like ~
U+2013	EN DASH	
U+2014	EM DASH	

1.1 Patch

Also package soulutf8 tries to patch package soul to improve its behaviour:

- A problem with additional levels of curly braces is fixed. As advantage more implicite kernings are detected. However, the result may be incompatible with the original behaviour of package soul because of these respected implicite kernings.
- ε-T_EX , especially \unexpanded is supported. This allows a better protection of token groups (\underbox{...}, math, ...).

1.2 Future

Currently package soul does not seem to be maintained. Nevertheless if there will be a new version that adds support for UTF-8, then this package may become obsolete.

2 Implementation

1 (*package)

.1 Reload check and package identification

Reload check, especially if the package is not used with IATEX.

2.3 Loading packages

Package soul uses \documentclass to detect \LaTeX .

 $129 \ifx\documentclass\@undefined$

2.3.1 plain T_EX

First we check, whether package soul is already loaded.

130 \expandafter\ifx\csname SOUL@\endcsname\relax

In case of plain TEX package soul defines some macros in a simple manner that will break the definitions of miniltx.tex, for example. Therefore these macros are first saved and restored afterwards.

```
\let\SOuL@orgDeclareRobustCommand\DeclareRobustCommand
131
132
     \let\SOuL@orgnewcommand
                                 \newcommand

2.5Redefinition of \SOUL@eval

\SOUL@eval Macro \SOUL@eval is redefined to add detection of the first byte of a UTF-8 sequence. Because \SOUL@eval is overwritten, a warning is issued, if the contents of \SOUL@eval is not as expected.

```
195 \SOuL@redefine\SOUL@eval{%
```

First the expected definition.

```

\SOuL@addfouroctets

2.7.1 Redefinition of \SOUL@splittoken

\SOUL@splittoken

Macro \SOUL@splittoken separates the first token or token group from a word and redefines the word to contain the remaining tokens. However if the remaining tokens are a token group, then the curly braces will be removed and the token group is splitted by the next call of \SOUL@splittoken. The redefinition avoids the removal of curly braces around the remaining tokens.

```
496 \SOul.@redefine\SOUl.@splittoken#1#2\SOUl.@stop{%
497 \global\SOUl.@token={#1}%
498 \global\SOUl.@word={#2}%
499 }#1{%
500 \global\SOUl.@token={#1}%
501 \SOul.@remainingtoken\relax
502 }
```

$\verb|\SOuL@remainingtoken||$

```
503 \def\SOuL@remainingtoken#1\SOUL@stop{%
504 \global\SOUL@word=\expandafter{\@gobble#1}%
505 }
```

2.8 Patches

The fixed \SOUL@splittoken allows to remove the double sets of curly braces in other macros of package soul. The benefit is that implicite kernings are more often detected and fixes a bug in package soul. The disadvantage is incompatibility. The width of the resulting strings may change.

\SOUL@flushcomma

```
506 \SOuL@redefine\SOUL@flushcomma{%
                                                                                                           \ifcase\SOUL@comma

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

¹http://ctan.org/pkg/soulutf8

CTAN:macros/latex/contrib/oberdiek/soulutf8.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/soulutf8.pdf Documentation.

Bundle. All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard "A Directory Structure for TEX Files" (CTAN:tds/tds.pdf). Directories with texmf in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script pdfatfi.pl that should be installed in such a way that it can be called as pdfatfi. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain T_EX:

```
tex soulutf8.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

```
soulutf8.sty \rightarrow tex/generic/oberdiek/soulutf8.sty \\ soulutf8.pdf \rightarrow doc/latex/oberdiek/soulutf8.pdf \\ test/soulutf8-test1.tex \rightarrow doc/latex/oberdiek/test/soulutf8-test1.tex \\ test/soulutf8-test2.tex \rightarrow doc/latex/oberdiek/test/soulutf8-test2.tex \\ test/soulutf8-test3.tex \rightarrow doc/latex/oberdiek/test/soulutf8-test3.tex \\ test/soulutf8-test4.tex \rightarrow doc/latex/oberdiek/test/soulutf8-test4.tex \\ test/soulutf8-test5.tex \rightarrow doc/latex/oberdiek/test/soulutf8-test5.tex \\ soulutf8.dtx \rightarrow source/latex/oberdiek/soulutf8.dtx
```

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

4.4 Refresh file name databases

If your T_EX distribution (te T_EX , mik T_EX , ...) relies on file name databases, you must refresh these. For example, te T_EX users run texhash or mktexlsr.

4.5 Some details for the interested

Unpacking with LATEX. The .dtx chooses its action depending on the format:

plain TEX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{soulutf8.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

\PassOptionsToClass{a4paper}{article}

An example follows how to generate the documentation with pdfLATEX:

```
pdflatex soulutf8.dtx
makeindex -s gind.ist soulutf8.idx
pdflatex soulutf8.dtx
makeindex -s gind.ist soulutf8.idx
pdflatex soulutf8.dtx
```

5 Catalogue

The following XML file can be used as source for the TEX Catalogue. The elements caption and description are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is soulutf8.xml.

```
